DETAILED ACTION

Allowable Subject Matter

1. Claims 6-20 allowed.
1. Claims 4 and 5 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 rejected under 35 U.S.C. 103(a) as being unpatentable over Song et al. (6,531,392) in view of Kim (6,052,169)

Regarding Claims 1 and 3, Song et al. disclose a method of forming a thin film transistor array panel using photolithography techniques where in Fig. 2 it is shown pads 24 and 74 with diagonal lines extending from these pads, gate lines 22 and data lines 62 and 72. Song et al. fail to disclose the required pad and driving/gate/data/signal line relationship. However, Kim discloses a liquid crystal display device having an equipotential electrode structure where in Figs. 1-4, the required pad and driving/gate/data/signal line relationship configuration is disclosed. Specifically in Fig. 3, pad 122 extend at a straight angle from the edge and also pad line extends at the same straight angle from the pad.

Art Unit: 2826

Regarding Claim 2, drive lines of Kim include gate lines and data lines.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required pad and driving/gate/data/signal line relationship in Song et al. as taught by Kim in order to have a liquid crystal display device with ease of manufacture.
